CAREER OBJECTIVE

Backend & AI Engineer focused on building **controlled LLM-driven systems**, adaptive workflows, and production-oriented AI services. Experienced in **Node.js backends**, AI orchestration logic, and end-to-end intelligent product development, with hands-on work in LLM integration, workflow automation, and system design

EDUCATION

St Josephs University,

07/2022 – 06/2025 | Bangalore

Bachelor of Computer Applications (Data Analytics)

– CGPA: 7.7 (First Class with Distinction)

EXPERIENCE

AI Intern, Oryzed

07/2025 – 10/2025 | Bangalore

- Built and integrated **LLM-powered backend workflows** using GoQ LLaMA 3.1
- Designed backend logic for LLM inference, response handling, and integration workflows
- Contributed to scalable, deployment-ready AI services

Business Data Analyst Intern, Green Builders & Interiors

12/2023 – 08//2025 | Bangalore

- Converted manual financial processes into **repeatable, semi-automated workflows**
- Standardized templates and reporting pipelines, reducing errors by 20%

Analyst Intern, Sastic Minds

08//2025 – 12/2025 | Coimbatore

- Performed data cleaning and integration as part of **pre-ML data pipelines** for industrial optimization
- Built an automated data consolidation application that merges multiple heterogeneous datasets into a single, clean Excel output with configurable input fields, filtering logic, and standardized formatting to improve data readability and downstream analysis.

PROJECTS

LAIPath — AI-Powered Adaptive Learning System,

12/2025 – Present

Backend + AI Engineering Project | In Testing (Production-oriented)

- Built a backend-driven AI learning system that generates **personalized, day-wise syllabi** based on user goals and progress.
- Implemented **controlled LLM workflows** with mandatory reflection and guided follow-up questions to enforce intentional learning.
- Designed **progress and adherence signals** to dynamically adapt learning paths and planning logic over time.

Drug-Likeness Prediction Using Deep Learning

02/2024 – 05/2024

- Built an **end-to-end inference pipeline** combining Conv1D + BiLSTM models for molecular classification
- Implemented preprocessing, model orchestration, and prediction logic for real-time inference
- Focused on pipeline reliability and generalization through hyperparameter tuning

PlanLift, AI-Driven Blueprint-to-3D Prototype (MVP)

08/2025 – 08//2025

- Built a **full-stack AI product MVP** converting 2D floorplans into 3D-style renders
- Designed backend APIs (Node.js, Express) for file handling and AI inference orchestration
- Integrated external AI models (Qwen/ControlNet) via Replicate SDK

CERTIFICATES

- Excel Skills for Business – Macquarie University (Coursera) – Intermediate Level 
- Supervised Machine Learning – DeepLearning.AI, Stanford University 
- Advanced Learning Algorithms – DeepLearning.AI, Stanford University 

SKILLS

Programming & Tools (Python (pandas, scikit-learn, PyTorch), SQL | Node.js, Next.js, Tailwind, Express | Power BI, Git, Linux, Cloudinary, Replicate SDK | Replicate SDK, Cloudinary)

ML & AI (LLM Systems & Prompt Engineering | AI Workflow Orchestration | Machine Learning | Deep Learning (CNN, BiLSTM))

Backend & Systems (Node.js, Express | Backend API Development | SQL / PostgreSQL | Git, Linux)

LANGUAGES

English, Malayalam (native), Hindi, Tamil, Kannada (limited), French (basic)
